## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 54-65 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 55, 56, 58, 59, 61, 62, 64 and 65 are rejected under 35 U.S.C. 102(e) as being anticipated by Willis et al.

Willis et al. teach an electrode structure in contact with heart tissue for mapping and ablation and further displaying a map of the structure while performing at least part of the procedure and annotating and manipulating the map (e.g., col. 18 lines 47-61, col. 20 lines 28-40). See also figures 1, 31 and 32

### ***Claim Rejections - 35 USC § 103***

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

Art Unit: 3737

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 54, 57, 60 and 63 are rejected under 35 U.S.C. 103(a) as being unpatentable over Willis et al.

Regarding claims, Willis et al. discloses determining the coordinates of the electrodes for later analysis and/or annotation (col. 6 lines 38-47, col. 17 lines 20-42 and 57-61) but doesn't explicitly address selecting the electrodes by entering the coordinates. However, it would have been obvious at the time the invention was made to a person of ordinary skill in the art to access the electrodes by entering the designated coordinates either through a keyboard or a pointing device as is a well known expedient in the graphical interface arts.
